

T2 - It was little too detailed in between so it felt like I lost the track of topic. Overall, it was a nice presentation very informative and engaging. It was simplified and easy to understand in beginning and end, but the 2nd and 3rd part got complex to understand.

T5 - Overall, the presentation was good. Concept was easy to understand. However, I didn't really understand the obstacle part that was obstacle in AR. Maybe because the obstacle talked about felt like it was disconnected with the topic.

E8 - Good presentation. However, I feel beginning could have been better by giving a simplified background and context of the topic. It would have been helpful if all PPT slides had bullet points of the things the person was speaking.

T9 - Overall good presentation and very informative and relevant. However, it would have been better if presentation was focused on just one topic and showed problems, solution, and opportunities in that field. Presentation was mostly about uses of VR in different field. I wish it was just on field and detail talk about it.
